

# Patent Technology

Adhering to the innovative spirit of "either the first or the only", HuiYue continues to strengthen R&D investment, layout global superior R&D resources, and build a library of appearance and structure. Seven R&D centers such as appearance, structure, electronics, testing, and PE cover 33 research fields, forming a technical map from common basic technologies to personalized key technologies. In recent years, through cross-border integration, artificial intelligence, and digital simulation technological breakthroughs, HuiYue has continuously innovated and upgraded its products and actively promoted the development of the fragrance industry. So far, the number of authorized patents has reached 100+, and the authorized invention patents have ranked at the forefront of the industry.

## THE THEORY OF ATOMIZATION

# TWO-FLUID AIR ATOMIZATION TECHNOLOGY

By the principle of shock air atomization, spread essential oil through air pressure. Essential oils release billions of particles in the particles in their natural habitat, rapidly disintegrating in the air, form high concentration ionic essential oil effective particles. The atomizing nozzle is not jam, not leak and true gas-liquid separation was achieved.
